

CITY OF PINOLE PUBLIC WORKS DEPARTMENT

Construction site BMPs:

- Keep construction grade below lot curb at 2 “ to prevent runoff
- Cover small areas with rolled material during rain (Bounded Fiber Matrix, Rolled plastic sheeting)
- Cover large areas with erosion control blankets and/or mulch
- Rock bags distributed in gutter before an inlet will slow flow and filter sediment. Protect inlet with straw waddles and rock bags
- Put Stucco and Concrete supplies and materials in one place with PH sampling equipment and cover with plastic
- SWPPP should include a narrative describing sampling procedure for PH and measures that will be taken to prevent stucco, concrete, lime etc. from polluting storm system. PH should be between 6-9
- Large river rock should be used to stabilize entrance and exit areas and prevent tracking to street
- Good Site House Keeping is advisable
- **NO HAY BALES**
